ESTIMATED RECOVERY TIMES from SCITON® AESTHETIC LASER TREATMENT

As a simple rule, the ratio of epidermal ablation over original thickness multiplied by 28 days will determine approximate healing time.

(Example: 20 microns/110 microns x 28 days = 5 days

Redness is commonly ½ of that calculated time.

Makeup can be applied in 1/3 the calculated time.

10um / 110um x 28 = 2.5 days

Redness = 1 day

Makeup = 1 day

20um / 110um x 28 = 5 days

Redness = 2.5 days

Makeup = 2 days

30um / 110um x 28 = 7.5 days

Redness = 4 days

Makeup = 2.5 days

40um / 110um x 28 = 10 days

Redness = 5 days

Makeup = 3 days

50um / 110um x 28 = 12.5 days

Redness = 6 days

Makeup = 4 days

WARNING: Smoking cigarettes during recovery period can both delay recovery time and possibly inhibit laser treatment results.
